The Technology CEO Council has created this e-Health Guide to help people and organizations track their progress and determine where they are today so that they can better understand where it is today and plan for the future.

Every community or organization stands today — the current state of accessing and using e-health information, and aggregation and analysis of data. Effective health care requires coordination and we will only succeed with a concerted, collaborative effort. Yet much work remains, stakeholders together to develop a consensus on the current state of accessing and using e-health information, and aggregation and analysis of data. Effective health care requires coordination.

This will give you a snapshot of where your community or organizational stakeholders make critical judgments about their current state of accessing and using e-health information, and aggregation and analysis of data. Effective health care requires coordination and we will only succeed with a concerted, collaborative effort. Yet much work remains, stakeholders together to develop a consensus on the current state of accessing and using e-health information, and aggregation and analysis of data. Effective health care requires coordination.

The good news is there is growing recognition

While Americans spend over $1.8 trillion each year on health care, and it shows. While productivity and quality across our economy have

inefficiencies are the result of underinvestment
